

*Project Name- **Nutrition Services** by Registered Dietitians (RD)*

Needs of the project

My professional background of Studies are a Bachelor's degree in Nutrition and Dietetics and a Master degree in Prophylactic and curative Nutrition & Dietetics, both hold at the University of Medicine and Farmacy "Grigore T.Popa" from Iasi.

After graduating I had a national exam to join the National college of Dietitian of Romania and within this, I got the title of Registered Dietitian.

In the medical industry present in Romania, the digitalization is at its beginning and a lot of services are still bounded to physical contact and direct human interaction, making the relationship between the client and the service provider more difficult, especially in terms of time and money.

In order to deliver high standard quality medical needs and making a stronger community of Registered Dietitian I'm coming with my project.

I want to create a web application with the purpose of becoming a platform of Nutrition services delivered by Registered Dietitian.

The prototype will start with Registered Dietitians from Iasi.
